- Develop their knowledge, skills and competence

Brief Job Description:

- Individuals at this job are responsible for designing and maintaining web-based applications that include static and dynamic content. This includes the design, layout and coding of a website.

- They may work standalone or along with application/functional developers as part of the overall solution that includes a web based component

- The Junior Software Developer is part of an agile development team building and working on enterprise grade software systems on top of the Microsoft .NET development stack. The Junior Software Developer is involved in all areas of development from design to development to testing

Job Responsibilities:

- Web Developer is responsible for designing, coding and modifying websites, from layout to function and according to a client's specifications.
- An entry-level software engineer, also called a junior engineer, works with a team of mid-level and senior engineers to develop, test, and maintain software applications and programs. ...
- As software engineers gain more years of experience, they work on more complex development projects..

Personal Attributes:

- This job may require the individual to work independently or in teams. The individual should be result oriented.
- The individual should also be able to demonstrate skills for communication, creative and logical thinking.
